Professional Summary

Backend-focused Software Engineer with hands-on experience maintaining and improving production ERP systems using FastAPI, PostgreSQL, and SQLAlchemy. Skilled in backend architecture, REST API development, database optimization, and debugging complex business logic. Experienced working with financial, warehouse, reporting, and role-based access systems in production environments. Interested in backend engineering, scalable systems, and AI-powered applications.

Experience

JIP Group (Jahon Invest Plast) Oct 2024 – Jul 2026
Software Engineer *Tashkent Region, Uzbekistan*

- Maintained and extended a production **ERP system** used for financial and warehouse operations.
- Developed backend services using **FastAPI, PostgreSQL, and SQLAlchemy**.
- Resolved production issues across contracts, payments, warehouse, and reporting modules.
- Refactored backend business logic into modular and reusable components.
- Optimized SQL queries and API endpoints, reducing response times by approximately **50%**.
- Implemented role-based access control for sensitive financial operations.
- Maintained and improved frontend functionality in **AngularJS (1.8)**.

Cognilabs Software Solutions May 2024 – Jul 2024
Software Engineering Intern (Backend) *Remote*

- Supported backend development using **Python, SQLAlchemy, and MySQL**.
- Assisted with database model updates and API implementation.
- Collaborated with a remote development team using **Git**.

Projects

IELTS Assistant AI Platform | ***Python, FastAPI, AI Integration***

- Developing the backend of an AI-powered IELTS preparation platform focused on Writing and Speaking practice.
- Integrated AI-based evaluation workflows for scoring student writing and speaking responses.
- Designed RESTful APIs and backend logic for handling user submissions and AI feedback processing.
- Worked with AI-assisted and agentic development workflows using Claude and Google AI tools.

Social Media REST API | ***Python, FastAPI, PostgreSQL***

- Developed a RESTful backend API with OAuth2 authentication using FastAPI and PostgreSQL.
- Designed relational database models using SQLAlchemy ORM and Alembic migrations.
- Implemented request validation and API schemas using Pydantic.
- Deployed the application to Heroku and later migrated it to an Ubuntu VPS.

My Gov Assistant AI | ***Python, Django, Gemini API***

- Developed an AI-powered assistant using Django to help users navigate and understand Uzbek government services.
- Integrated the Gemini API to provide interactive guidance for registration processes and specific service requirements.
- Designed backend workflows to efficiently process user inputs and deliver accurate, context-aware AI responses.

Technical Skills

Languages: Python, SQL, JavaScript (basic), HTML/CSS

Backend: FastAPI, Django, Django REST Framework, SQLAlchemy, Alembic, Pydantic

Databases: PostgreSQL, MySQL, Redis

Tools & Technologies: Git, Linux, Postman, Docker, REST APIs, Firebase, AI-assisted Development

Languages

Uzbek — Native
English — Technical Working Proficiency
